

LASER THERAPY

**New service
available at
Meopham
Veterinary Hospital**

**The Drug Free, Surgery
Free Solution for pain
relief**

Pain free, non-
invasive & minimal
restraint

WHAT IS K-LASER?

The laser delivers specific wave lengths and frequencies of laser light to increase circulation by drawing oxygen and nutrients to the affected area.

This in turn decreases swelling, inflammation and muscle spasm and therefore reduces stiffness and pain.

**DISCOUNTS AVAILABLE
WHEN PURCHASING A
BLOCK OF SESSIONS**

WHEN CAN LASER HELP?

- Wound healing including chronic wounds
- Osteoarthritis and lameness
- Pain management
- Ligament & tendon conditions
- Nerve & spinal cord problems
- Bone & cartilage repair

Each session typically lasts between 2-12 minutes depending on the areas that require treatment. K-laser is carried out in our qualified nurse clinic appointments.

WHAT TO EXPECT

No patient sedation or restraint is required, it is usually a pleasant experience and the pet will often lay on a bed whilst laser is being performed.

K-Laser is cumulative in effect and so whilst improvements may be seen after only 1 session, most patients require several sessions for greatest benefit.
